This Data Book was prepared by the City of Mountain View's Community Development Department to summarize basic data about the community. Most of the data contained in this publication are from the Federal Census conducted every ten years. The majority of this information is from the 2000 Census. However, data are also presented from the 1970, 1980 and 1990 Censuses. Previous publications have included data from the 1960 Federal Census and two special Santa Clara County census conducted in 1966 and 1975. Data is also included from the Association of Bay Area Governments (ABAG) bi-annual Projections series, especially from Projections 2002, and from data compiled by City staff, especially on land use and development.

USERS OF THIS INFORMATION ARE CAUTIONED THAT DATA FROM THE FEDERAL CENSUS MAY DIFFER (SOMETIMES SIGNIFICANTLY) FROM OTHER DATA SOURCES, THAT DATA FROM DIFFERENT SOURCES ARE OFTEN NOT DIRECTLY COMPARABLE SINCE THE INFORMATION IS GATHERED IN DIFFERENT WAYS OR USING DIFFERENT DEFINITIONS OF THE CATEGORIES, AND THAT DATA ARE ALSO OFTEN DERIVED FROM SAMPLE DATA SO MAY DIFFER FROM DIRECT COUNT DATA. Errors or inconsistencies in the data, where known, are pointed out within the body of this document to the extent possible. It is also noted that data has been summarized by City Total and by Planning Areas. For sample data, the City Total may not be equal to the sum of the data from each Planning Area due to rounding and due to the approximations inherent in the sampling process. The Planning Areas of Mountain View are shown on the map on Data Sheet Gen – 4. The Planning Areas are either equal to an individual Federal Census Tract (for the North Bayshore, Thompson, and Sylvan Dale Planning Areas) or are summations of several Census Tracts (for all other Planning Areas). The Federal Census Tracts are shown on the map on Data Sheet Gen – 3.

The most reliable use of the data is to compare Planning Area to Planning Area for a given year or to compare the same data item (such as number of housing units) from the same data source (such as the Federal Census) across several years. Such comparisons are useful for indicating general trends or to gain an overall picture of the characteristics of one area compared to another. **THE USER IS CAUTIONED THAT THERE MAY BE DIFFERENT DEFINITIONS OF A DATA CATEGORY EVEN FROM THE SAME DATA SOURCE OVER THE SPAN OF TIME, ESPECIALLY FOR THE RACE AND ETHNIC CATEGORIES IN THE FEDERAL AND OTHER CENSUSES.**

Data from the Federal Census is generally considered to be accurate to $1\% \pm$ at the City level, although the data for the North Bayshore, especially for the earlier censuses, are significantly higher than City records would indicate. Data for the Census Tracts, and therefore the Planning Areas, are generally considered to be accurate to $3\% \pm$. Data on housing units from City records is considered to highly accurate since it is based on 100% count of building records. Accuracy of other data from City sources is generally not known since they were usually developed from special studies and there are no other comparable sources of data to check them against. Data on land areas and land uses by land area are compiled from a City map data of known $1\% \pm$ accuracy.
